Executive Summary

JS Contracting & Electrical Services is an owner-operated electrical and remodel contractor opening in Westford, Massachusetts, planned to reach about $330,000 in revenue in year one, $590,000 in year two and $850,000 in year three while paying the owner a full salary from the first month. It needs $95,800 to open, $65,800 of which the owner funds from the sale of his previous company, and it asks nothing of outside investors.

The business. The owner is a Massachusetts master electrician who is selling S&T Electrical to run a smaller company with one van, the owner on every job and overhead low enough to be profitable at one crew's volume. JS sells the residential work with the best margins and the strongest demand (panel upgrades, EV charger installations, standby generators, lighting, troubleshooting) and the kitchen, bath and basement remodels that electrical work usually opens up. It is the only company in the area that markets both trades and has an online presence.

The market. The nine-town service area holds about 243,000 people, including 45,000 suburban households with incomes of $130,000 to $200,000 and homes worth $550,000 to $1.1 million, roughly half of them built before 1980 on 60 to 100-amp services. Massachusetts had 166,296 EVs on the road at the end of 2025 and is installing about 31,000 heat pumps a year, each one a dedicated circuit and often a panel upgrade. The competitors are fleet companies with price complaints and well-liked one-person shops at capacity; nobody publishes prices.

The edge. Written prices and no dispatch fee. The permit and inspection included in every quote. One crew for the wiring and the walls. A two-year workmanship warranty. Rebate paperwork handled. And the owner, not a dispatcher, on the phone and on the job.

Marketing. $30,500 in year one, 11% of revenue, on Google Business Profile and reviews, Google Local Services Ads, a referral network of remodelers, agents and supply houses, and six service landing pages on the finished website. The target is 530 leads, 240 jobs and 50 Google reviews within six months. Marketplace lead sites are left out.

Team. Owner plus a registered apprentice from month two; a journeyman electrician in month 16; a second van and a second journeyman in month 28. A bookkeeper, a CPA, an attorney and an insurance agent work part-time from the start.

Financial summary. Net profit is stated after the owner's salary (the owner draw), so the owner's real take is the last column.

Year	Revenue	Gross margin after materials	Net profit after owner salary	Owner salary plus profit
1	$330,000	60%	($4,500)	$67,500
2	$589,000	61%	$36,900	$126,900
3	$850,000	61%	$56,400	$156,400

Funding. $95,800 of startup uses: a used van, upfit and wrap, tools and inventory, licenses, insurance, legal and accounting setup, and a $30,000 working-capital reserve. Sources: $65,800 owner cash (69%), a $30,000 van loan, and a $25,000 line of credit arranged but undrawn.

Status. The brand, the 13-page website and this plan are complete. Before launch the owner must confirm five facts for the website (phone, email, domain, license numbers, service area), have the S&T sale agreement reviewed for a non-compete, form the entity and bind insurance.

Company Description

JS Contracting & Electrical Services is a new owner-operated electrical contractor and home-improvement contractor, started in 2026 by a Massachusetts master electrician who is selling his larger firm, S&T Electrical, to run a smaller shop with lower overhead and the owner on every job.

Item	Detail
Legal name	JS Contracting & Electrical Services LLC (to confirm; LLC recommended, S-corp election to review with the accountant)
Owner	[Owner name], master electrician, 100% owner
Formed	2026 (filing date to confirm)
Base	[Town], Massachusetts (home office and one service van; no storefront)
Service area	Westford, MA and about 30 miles around it: Chelmsford, Lowell, Littleton, Acton, Groton, Tyngsborough, Dunstable, Carlisle, Boxborough, Ayer, Harvard, Concord (assumption, to confirm)
Licenses	Massachusetts Master Electrician license [#]; Home Improvement Contractor registration [#]; Construction Supervisor License [#] if remodel scope requires it
Insurance	General liability ($1M/$2M), commercial auto, workers' compensation, tools coverage
Stage	Pre-launch: brand, website and plan complete; entity, insurance and marketing accounts to set up

Mission. Do the electrical work right, on the schedule we promised, at the price we quoted, and finish the walls behind it.

What changes from S&T Electrical. S&T grew into a crew-and-fleet business where the owner managed more than he wired. JS is built the other way around: the owner plus one journeyman or apprentice, one van, a tight list of high-margin residential jobs (panel upgrades, EV chargers, generators, lighting, troubleshooting) and the remodel work around them. Overhead stays low enough that the business is profitable at a volume one crew can deliver, and the owner's name is the brand.

Transition points to settle before launch.

- Closing date of the S&T sale, and whether the purchase agreement includes a non-compete or non-solicitation clause. If it does, the service area and the customer outreach in this plan must be checked against it.
- Whether JS may say "formerly of S&T Electrical" in marketing. This plan assumes it may not, so the website does not mention S&T.
- Which tools, vehicle, phone number and supplier accounts transfer to JS, and which stay with S&T.

Why this business works. Homes in the area are mostly 30 to 60 years old, electrical loads are rising (EV chargers, heat pumps, induction ranges), and the customer who needs a panel upgrade usually needs drywall and trim work when it is done. One contractor who does both saves the customer a second bid and a second

schedule, and keeps the higher-margin finish work in house.

Services & Pricing

JS sells six residential job types at published typical prices, troubleshooting at a stated first-hour rate, and remodels at a fixed price under a Massachusetts home-improvement contract. Nobody else in the service area publishes prices; that alone sets JS apart.

Service	What is included	JS typical price (written quote after a site visit)	Local market reference	Target gross margin
Panel upgrade, 100A to 200A	New panel and breakers, grounding and bonding, surge protection, labels, utility coordination, permit, inspection, patching	$3,000 to $6,000	$2,500 to $8,000 in MA, about $4,000 average (EngineerFix)	45 to 55%
EV charger, Level 2	Load calculation, 40 to 60A circuit, NEMA 14-50 or hardwired, permit, rebate paperwork	$900 to $2,500 wiring; $1,400 to $3,000 with charger	$1,200 to $3,000 installed in MA (NuWatt)	50 to 60%
Standby generator, 20 to 26 kW	Sizing, unit, automatic transfer switch, pad, wiring, gas-fitter coordination, permit, start-up	$10,000 to $16,000	$12,000 to $22,000 whole-home, Boston area (ConsumerAffairs)	25 to 35%
Portable generator inlet and interlock	Inlet box, interlock kit, wiring, permit	$900 to $1,800	Transfer switch alone $1,300 to $1,700 (Angi)	50 to 60%
Lighting and fans	Recessed LED, under-cabinet, fixtures, fans on braced boxes, dimmers, patching	$150 to $300 per recessed fixture; six-light kitchen $1,200 to $2,000; fan $200 to $450	Fixture install $150 to $250 nationally (Pipelineon)	50 to 60%
Troubleshooting and repairs	Diagnosis, repair, code corrections, inspection-report fixes with a letter	$175 to $250 first hour, then $125 to $150 per hour plus materials	$75 to $175 service fee and $75 to $150 per hour in Lowell and Chelmsford (HomeGuide)	55 to 65%
Remodels (kitchen, bath, basement)	Scope, permits, electrical, framing, drywall, trim, subcontractor scheduling	Basement $40 to $75 per sq ft; kitchen $30,000 to $80,000; bath $15,000 to $35,000	Set by scope; fixed-price contract	20 to 30% on subs and materials, 45%+ on self-performed electrical
Light commercial	Fit-outs, lighting retrofits, equipment circuits	Quoted, or $150 to $185 per hour effective	Commercial rates run above residential	35 to 45%

Pricing model.

- Flat-rate price book for the twenty most common tasks (outlet, fixture, fan, 20A circuit, hot-tub circuit, smoke and CO set, EV circuit by run length, panel by configuration), so the quote is written on site and the margin is known before the job starts.
- Time and materials only for diagnosis, after the stated first-hour fee. Anything beyond one visit gets a fixed quote first.
- Material markup of 50 to 100% on stock and wiring, 15 to 25% on equipment the customer can price online (generators, chargers). Price-book labor is set to an effective $150 to $185 per hour, which covers a $40 per hour journeyman at about 60% utilization plus overhead and profit.
- No dispatch fee inside the service area. The first-hour rate covers travel and diagnosis, a direct answer to the fee complaints aimed at the fleet companies.

Terms. Service calls paid at completion by card or bank transfer. Installs take a deposit capped at one-third, as Massachusetts law requires for home-improvement work, and the balance at completion. Remodels follow a milestone schedule written into the contract, with change orders signed before the work changes. Warranty: two years on workmanship, above the one-year norm, with manufacturer warranties passed through.

What JS does not do. New-construction tract wiring, large bid-and-spec commercial work, overnight dispatch (emergencies get a same-day call-back instead), solar installation, plumbing, HVAC and roofing. Those go to partner firms, and the partners send electrical and remodel work back.

Industry & Market Analysis

JS enters a $347 billion US industry that is growing slowly overall but shifting toward exactly the retrofit work JS sells, in a service area of about 243,000 people where roughly half the homes were built before 1980 and suburban household incomes run $130,000 to $200,000.

Industry.

Metric	Figure	Source
US electrical contractor revenue, 2026	$347.5 billion, up 0.7% in 2026; 4.8% a year 2021 to 2026	IBISWorld
US electrical contractors	About 262,000 firms; the vast majority under $2 million in revenue	IBISWorld
Work mix	New construction 36.6% of revenue; service, repair and maintenance 35.7% (2024 profile)	EC Magazine
Electrician jobs, US	Up 9.5% from 2024 to 2034, about 81,000 openings a year	BLS via O*NET
Electricians in Massachusetts	About 17,810 employed; median wage $79,000 to $82,000 (2024 to 2025)	BLS OEWS via TradeCareerPath

Demand drivers.

- Electric vehicles. 166,296 EVs were on Massachusetts roads at the end of 2025 against a state target of 900,000 by 2030, with net additions of 35,651 in 2024 and more than 25,000 in 2025 (Mass.gov climate report card). The federal 30C home-charger credit ended for installs after June 30, 2026, so the close now rests on utility wiring rebates: up to $700 from National Grid and up to $700 standard or $1,700 discount-rate from Eversource. Every EV sold in the suburbs is a dedicated-circuit job and often a panel upgrade; Schneider Electric estimates 48 million US homes need a service upgrade for a typical Level 2 charger.
- Heat pumps. Mass Save put heat pumps in about 31,000 homes in 2025 after 40,116 in 2024, and the state needs about 62,000 a year by 2030 (Mass Save, WBUR). Whole-home rebates run up to $8,500, and income-eligible households up to $16,000 with panel work covered. A heat pump, an induction range and an EV push a 100-amp house to 200 amps.
- Aging houses. Westford's median home was built in 1983 and about 45% of its 9,240 units predate 1980; Chelmsford's median is 1965; 42.7% of Lowell's stock predates 1939; the Middlesex County median is 1959 (Point2Homes, TopHap, NeighborhoodScout). Pre-1980 homes mean 60 to 100-amp services, fuse or Federal Pacific panels, and ungrounded or aluminum circuits: the core base for service changes, rewires and remodel electrical.
- Backup power. Demand is outage-driven and lumpy. Massachusetts storms have knocked out 250,000 to 300,000 customers at a time, yet Generac's home-standby shipments fell 25% in late 2025 after a quiet storm year and only about 6.75% of addressable homes own a unit (Generac Q4 2025 call). Maintenance plans at $400 to $500 a year smooth the swings.

- Remodeling. Owner spending on improvements is about $519 billion a year nationally and growth is slowing toward 0.5% by mid-2027 (Harvard JCHS); Boston has ranked top five among metros for spending per owner. A flat market rewards taking share by bundling, which is the JS model.
- Labor. About 10,000 electricians leave the trade each year against 7,000 entering (EnergySage), and 88% of Massachusetts clean-energy employers report hiring difficulty. A lean shop built on the owner's own hours and a registered apprentice is the realistic structure.

Service area. Figures are ACS-derived from third-party summaries; verify at data.census.gov before a lender submission.

Town	Population	Median household income	Median home value	Owner-occupied	Housing notes
Westford (base)	24,690	$181,500 to $187,200	$689,400	n/a	9,240 units, median built 1983, about 45% pre-1980, 35 units permitted in 2024
Chelmsford	36,446	$138,800 to $141,300	$590,900	82%	13,942 units, median built 1965
Littleton	10,200	$146,300 to $149,700	$633,000 to $658,300	n/a	Municipal electric utility; check rebates by address
Acton	23,900	$153,300	$757,500 to $807,300	76%	About 9,500 units
Groton	11,300	$193,300	$673,500 to $736,800	66 to 90% (sources conflict)	Municipal electric utility
Tyngsborough	12,480	$129,300	$487,800 to $552,500	86%	No franchise electrician coverage
Dunstable	3,400	$202,400	$624,300	n/a	Rural, well and septic pumps common
Carlisle	5,220	$176,200 and up	$1,055,600 to $1,103,900	94%	Highest values; generator and remodel demand
Lowell	114,800	$76,200	$395,100	44%	42.7% of stock pre-1939; landlords, multifamily, light commercial

The nine towns hold about 243,000 people. The eight suburbs alone hold about 128,000 people in roughly 45,000 households with $130,000 to $200,000 incomes, 76 to 94% owner-occupancy and $550,000 to $1.1 million home values. New construction is thin (Westford permits 20 to 35 units a year), so this is a retrofit market, which suits a service-and-upgrade shop over a new-construction wirer.

Size of the opportunity (derived). If 3% of the 45,000 suburban households buy one major electrical job a year (panel, EV circuit, generator) at an average of $3,500, that is about 1,350 jobs and $4.7 million a year, before service calls (10% of households at $350, about $1.6 million) and remodels. JS's year-three revenue target of about $850,000 is a 10 to 13% share of that pool, held by about 15 identifiable competitors and a long tail of one-person shops.

Customer segments.

Segment	What they buy	Share of JS revenue (plan)
Suburban homeowners in 1960s to 1980s houses	Panel upgrades, lighting, circuits, remodels	About 55%
New EV and heat-pump adopters	Chargers, dedicated circuits, panel capacity, rebate paperwork	About 15%
Storm-prepared households	Standby generators, interlocks, maintenance plans	About 10%, lumpy
Home buyers, sellers and their agents	Inspection-report repairs, pre-sale fixes, letters for closing	5 to 10%
Lowell landlords and light commercial	Service calls, code corrections, fit-outs, lighting retrofits	5 to 10%

Seasonality. January and February are the trough for residential electrical and remodel starts; interior lighting, EV chargers and remodel electrical are the winter fillers. April to October carries service changes, exterior work and generators (pads need thawed ground). Rebate deadlines at year end (Mass Save heat pumps by December 31, 2026; the National Grid EV rebate window closing December 10, 2026) create a fourth-quarter push, and storm years swing generator volume by a quarter in either direction (TCNECA, ServiceTitan).

Competitive Analysis

Around Westford the review leaders are fleet companies that carry price complaints, the best-liked shops are one-person operations at capacity, and only two firms combine electrical with remodeling, neither with any online presence. There is room for an owner-operated electrician who publishes prices and finishes the walls.

Company	Base	Type	Reviews	Sells on	Weak spot
Kuhlman Electric	North Billerica	Fleet, about 50 staff claimed	Yelp 4.9 (29); claims 2,500+ Google	0% financing, 3 and 5-year warranties, a page per town	Recurring price complaints, no rates shown
Sylvester Electric	Tewksbury	Fleet	4.7 (944, Birdeye)	Generac installer, EV, per-town pages	Price and no-show complaints; ex-staff cite sales quotas
Heritage Home Service	NH, Tewksbury branch	Multi-trade fleet	4.9 (3,168, Best Pick)	Generac dealer, flat pricing, call center	Complaints of about $350 per hour and repeat visits
MillTown	Chelmsford	Multi-trade	Google 4.0 (488); Yelp 2.5 (112)	Coupons, Generac, EV page	Weakest Yelp score in the area after 45 years
Ryan Gath Electric	Chelmsford and Westford	Two offices	Google 4.7 (about 30); Angi 4.8 (28)	Authorized Generac dealer, the established local name	Modest review count for its footprint
Integrity Electrical	Wilmington	Owner-led, 2 to 10 staff	Google 4.9 (140)	"Best-rated" brand, Westford and Lowell landing pages, Yelp ads	20 minutes away; no remodel capability
Spaulding Electric	Littleton	Owner-led	Google 5.0 (231)	Generac Select dealer, Tesla and ChargePoint, financing	Dated website; generators first
JP O'Brien Electric	Wilmington	Small crew	Angi 4.9 (303); Yelp 5.0 (71)	Responsive, generators, EV	Electrical only
Harland Electric	Littleton	Family-owned	Angi 4.9 (137)	Prompt, reasonable, 20-mile radius	Owner's second job limits capacity

Company	Base	Type	Reviews	Sells on	Weak spot
Westford owner-operators (Carter, John Small, Valcourt, Gervais, A-Phase, BLM&C)	Westford	1 to 2 people	Few or no Google reviews; Nextdoor favorites	Neighbor word of mouth	Invisible in search; smaller jobs only
Gulliver Contracting and Gilbride Electric	Westford, Chelmsford	Electrical plus remodeling	About zero reviews; a Yelp listing marked closed	The JS positioning	Not marketed anywhere

How they market. Fleet companies buy Yelp sponsored slots, run a landing page per town, offer financing and multi-year warranties, and answer phones around the clock. Owner-operators rely on Nextdoor and referrals. Nobody publishes a rate card; the only price statements found were a $160 service fee (Giroux), $75 to $150 per hour (Santos) and a no-dispatch-fee promise (MJP). No pure electrician in the area sells a maintenance or safety-inspection plan. Franchises are absent: Mister Sparky stops at Billerica and Bedford, and Mr. Electric has no Massachusetts franchise covering these towns.

The bar for the Google map pack. Likely top-three results for "electrician Westford MA" and "electrician Chelmsford MA" carry roughly 25 to 500 Google reviews at 4.7 to 5.0 (Ryan Gath, Integrity, Spaulding, Giroux, Santos, MillTown). A new company with 50 recent five-star reviews can enter that set within a year.

Where JS wins.

1. One license, one crew, one permit holder for remodel electrical. Gulliver and Gilbride hold the ground but have not claimed it online; local remodelers (JP Works, Ted's, STL) keep no electrician on staff and are partner prospects.
2. Published written pricing for the ten most common jobs and no dispatch fee when the work is done, the direct answer to the complaints aimed at Kuhlman, Sylvester, Heritage, Landry and MillTown.
3. Review velocity: 50 Google reviews in six months and 150 in 18 months, requested on every job, with BBB, Yelp, Houzz, Nextdoor and the Generac locator carrying one matching license number and address.
4. The electrification bundle for an EV-heavy suburb: panel-capacity audit, EV and heat-pump circuits, rebate paperwork and a generator interlock as one package, backed by ChargePoint, Tesla or Qmerit certification (only Wired and Denommee hold them locally) and Generac dealer status.
5. Owner on every job, with a same-day call-back promise and a 48-hour slot for small jobs, in a market where the best-liked locals are at capacity and Nashua and Tyngsborough have no franchise coverage.

Sources: Yelp, electricians near Westford · Angi, Westford electrical · BBB, Westford electricians · Expertise, Chelmsford electricians · Mister Sparky Greater Boston North. Review counts were read from search listings in October 2026 and move constantly; verify before quoting them to a lender.

Marketing Strategy

Year one spends about $30,000, or 11% of the revenue target, front-loaded on the four things that put a new electrician in front of local homeowners: Google Business Profile and reviews, Google Local Services Ads, a referral network of remodelers, agents and supply houses, and the website's service pages. Shared-lead marketplaces are left out on purpose.

Positioning. For homeowners in Westford and the towns around it who want electrical work done right the first time, JS Contracting & Electrical Services is the owner-operated electrician who quotes in writing, pulls the permit, and finishes the walls, unlike fleet companies with commissioned technicians and surprise fees.

Messages, in the order they appear everywhere.

1. Owner on every job.
2. Written price before we start, permit and inspection included, no dispatch fee.
3. One crew for the wiring and the walls.
4. Rebate paperwork handled (EV, heat pump, generator).

Who we are talking to.

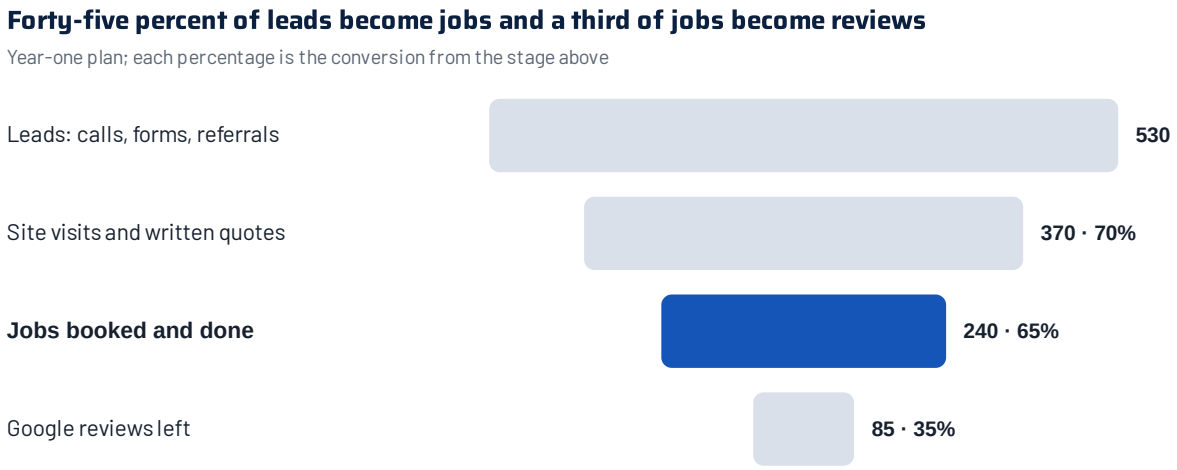

Customer	Trigger	What they search or ask	Offer
The 1970s colonial	Breakers trip, fuse box, buying an EV or heat pump	"electrician near me", "200 amp panel upgrade cost"	Panel upgrade with EV circuit bundled, $3,000 to $6,000, written quote
The new EV owner	Car delivery date	"EV charger installer near me", "Tesla wall connector installation", rebates	Level 2 install from $900 with the $700 utility rebate filed for them
The remodeler	Kitchen, bath or basement project	"basement finishing Westford", asks a friend	One contractor for electrical and finish work, fixed-price contract
The storm-weary household	An outage, a neighbor's generator	"whole house generator installation", "Generac installer near me"	Sizing visit, standby or interlock options, maintenance plan
Referrers: remodelers without an electrician, real-estate agents, property managers, supply-house counters, HVAC and solar installers	A job that needs a licensed electrician fast	A phone call	Same-day call-back, inspection-report letters, co-branded flyer, a thank-you for every referral

Channels and budget, year one.

Channel	Role	Year-1 cost	Leads per month (by month 6)	Cost per lead	Target
Google Business Profile and reviews	Map pack; where 83% of people read local reviews	$0 plus the owner's time	8	$0	50 reviews by month 6, 150 by month 18, every review answered within a day
Google Local Services Ads	Paid phone leads from month 2 or 3 (verification takes up to 90 days)	$14,000 ($1,000 to $1,500 a month)	15	$39 to $60 (SearchLight)	40%+ of leads booked
Referral network	Highest-margin, highest-close leads	$2,500 (lunches, flyers, thank-yous)	8	About $30	10 active partners by month 3; 40 to 60% of revenue from referral and repeat by year two
Website and local SEO	Organic leads from months 6 to 12	$1,500 setup, $600 hosting and tools	5, rising to 15 in year two	Low	Map-pack top three in Westford, Chelmsford and Littleton by month 12
Google Search Ads	Tested from month 4 on service-plus-town keywords only	$7,000 ($600 a month)	4	About $90 (LocaliQ)	Pause any keyword over $150 per lead
Nextdoor and Facebook	Neighborhood presence, job photos, two free posts a month, small boosts	$1,800	3	$40 to $70	Nextdoor Neighborhood Fave in year two
Vehicle wrap, yard signs, door hangers at job sites	Always-on local visibility	$3,600	2	n/a	Wrap on day one; sign at every multi-day job
Angi, HomeAdvisor, Thumbtack, Yelp Ads	Not used in year one: leads are shared, $15 to $85 each, and close at 6 to 15%	$0	0	n/a	Revisit only if capacity exceeds demand
Follow-up by text and email	Review request, 30-day check-in, seasonal reminders (generator service, rebate deadlines)	Included in software	Repeat work	n/a	25% of year-two jobs from past customers
Total		About $30,500	About 45	About $65 blended	240 jobs booked in year one

Year two drops to about 8% of revenue and year three to 7% as referrals and organic search carry more of the load, matching the 5 to 12% range small home-services companies spend (Pipelineon).

The lead funnel, year one. About 530 leads produce roughly 370 site visits or phone quotes and 240 booked jobs, a 45% booking rate in line with the 42 to 43% that Local Services Ads and call-booking benchmarks show (ServiceTitan). Missed calls are the biggest leak for a one-van company, so the business number rings the owner's phone and the office help, and every missed call gets a text within five minutes.

Year-one plan assumptions, four stages.

The booking rate is the number to watch: at 45% the plan works, and every five points below it costs about 27 jobs a year.

Launch calendar.

Quarter	Marketing work	Measure
Q1 (launch)	GBP created and verified, LSA background checks submitted, website live on the domain, van wrapped, citations built, first ten referral partners visited, review engine running	20 reviews, 10 partners, LSA live
Q2	Search Ads test, EV rebate campaign to new-EV households, generator pre-season push (sizing visits in April and May), first two cost-guide articles	50 reviews, cost per booked job under $150
Q3	Town pages for the five core towns, fall fairs and youth-sports sponsorships, home-inspection letter program for agents	Map-pack top three in Westford, 25% referral share
Q4	Rebate-deadline campaign (Mass Save by December 31, National Grid EV by December 10), generator maintenance plans sold to past customers, year-two budget set from actual cost per lead	85 reviews, 240 jobs, marketing at or under $30,500

Rules we follow. Reviews are asked for on every job, never paid for, never gated by rating, and never written for the customer, per Google's review policy and the FTC Consumer Review Rule (FTC rule summary). The master electrician license and Home Improvement Contractor registration numbers appear on the website,

the van and every ad, as Massachusetts requires.

KPIs, reviewed monthly. Leads by source, booking rate, cost per booked job, reviews added and average rating, map-pack rank for "electrician" plus each core town, referral share of revenue, average ticket, and revenue against the month's target.

Website & Google SEO Plan

The website is built and waiting on five facts from the owner: phone number, email, domain, license numbers and the final list of towns. The SEO plan is local-first: Google Business Profile, reviews and citations carry the first six months, and the service and town pages take over by month twelve.

Site status.

Item	Status
Pages	13: home, services, six service landing pages (panel upgrades, EV chargers, generators, lighting, repairs, remodels), service area, about, contact with quote form, privacy policy, 404
Structured data	Electrician business schema with the full service area on every page; Service, FAQ and breadcrumb schema on each service page
Speed and mobile	Static HTML and CSS, no frameworks, two web fonts, images under 20 KB; built to pass Core Web Vitals (LCP under 2.5 s, INP under 200 ms, CLS under 0.1)
Quote form	Works on Netlify with no setup; shows the phone and email if sending fails
Open	Replace the placeholders, buy the domain, add Google Analytics 4 and Search Console, add a call-tracking number for ads only
Hosting	Netlify free tier recommended; GitHub Pages works but needs a form service

Keyword plan and page map. National volumes where a published figure exists; town-level volumes are unpublished and small (tens a month each), which is why map-pack presence matters more than any single keyword.

Keyword cluster	Intent	Page that targets it	Signal
electrician near me; electrician Westford MA, Chelmsford MA, Acton MA, Littleton MA, Groton MA, Lowell MA	Hire now	Home, service-area page, Google Business Profile	"electrician near me" 230,000 to 450,000 searches a month nationally (Webtonic)
emergency electrician near me; breaker keeps tripping; outlet not working	Urgent repair	Electrical repairs page	12,100 a month nationally (MarketKeep)
200 amp panel upgrade; electrical panel upgrade cost Massachusetts; Federal Pacific panel replacement	Research, then hire	Panel upgrades page plus a cost-guide article	About 14,500 a month and rising; ads cost $15 to $30 a click (Pipelineon)
EV charger installation; Level 2 charger installer near me; Tesla Wall Connector installation; EV charger rebate Massachusetts	Hire	EV charger page plus a rebate guide	About 21,000 a month, up fourfold in two years; ads $6 to $12 a click
whole house generator installation; Generac installer near me; what size generator do I need	Research, then hire	Generator page plus a sizing guide	Ads $10 to $25 a click

Keyword cluster	Intent	Page that targets it	Signal
recessed lighting installation; ceiling fan installation near me; under-cabinet lighting	Hire	Lighting page	Volume unpublished
kitchen remodel electrician; basement finishing Westford MA; bathroom remodel contractor Chelmsford	Hire	Remodeling page	Volume unpublished; almost no local competition for the combined term
commercial electrician Lowell MA; office buildout electrician	Hire	Services page, commercial section	Ads about $19 a click, the priciest cluster
Questions: do I need a permit to install an EV charger in MA; how much does a 200 amp panel upgrade cost in Massachusetts; signs you need a panel upgrade	Research	FAQ sections and articles	Long-tail, low competition, feeds the service pages

Local SEO checklist.

- [ ] Create and verify the Google Business Profile. Primary category Electrician; secondary categories Electrical installation service, Electric vehicle charging station contractor, Lighting contractor, and Remodeler if the live selector offers it. Hide the street address as a service-area business and list the 16 towns.
- [ ] List services one line per job on the profile (panel upgrade, EV charger, generator, outlets, fans, lighting), add hours, and upload ten real job photos at launch, then several a month.
- [ ] Run the review engine: ask at the walkthrough, text the review link two hours later, answer every review within a day. Target 50 reviews by month 6 and 150 by month 18.
- [ ] Build citations with one exact name, address and phone string: Apple Business Connect, Bing Places, Yelp, Facebook, BBB, Nextdoor, Angi, Houzz, Yellow Pages, Manta, MapQuest, Foursquare, ChamberofCommerce.com. Top-ranked local businesses average 86 citations against 75 for tenth place (BrightLocal).
- [ ] Join the directories customers trust: the Generac dealer locator, ChargePoint and Tesla installer lists, the Qmerit network, utility and Mass Save contractor lists, the Greater Lowell Chamber ($349 a year), the Nashoba Valley Chamber and the Westford Business Association.
- [ ] Connect Search Console and Google Analytics 4; use a call-tracking number only on ads so the profile and citations keep one phone number.
- [ ] Publish eight to ten town pages with unique content (the town's wiring inspector and permit process, the electric utility and its rebates, jobs completed there), not a template with the town name swapped, which Google treats as doorway pages (Google spam policies).
- [ ] Post two articles a month for six months: the panel-upgrade cost guide, the EV charger rebate guide, generator sizing, signs of a failing panel, remodel electrical code basics, aluminum-wiring repair options.
- [ ] Post on the Business Profile weekly (a job photo and two sentences) and seed its Q&A with the permit, rebate and hours questions.

What to expect. Most local campaigns see leads from months three to six and settled visibility at six to twelve months; a new domain adds two to three months (Seologist). Local Services Ads show above the map pack in about half of town-modified searches, so they bridge the gap until organic rankings arrive (WebFX study). Google stopped showing FAQ rich results in 2026; the FAQ markup stays because it is harmless, and the FAQ content stays because customers read it.

Measured monthly. Profile calls, direction requests and website clicks; map-pack rank for "electrician" plus each core town; organic sessions and form submissions; calls from the site; reviews added and average rating; cost per lead by channel.

Operations Plan

One van, one crew, and a job that runs the same way every time: call, site visit, written quote, permit, work, inspection, walkthrough.

Job workflow.

1. Intake. Calls, texts and website forms land on the owner's phone and in the field-service app the same day. Every lead gets a reply within one business day and a request for a photo of the panel.
2. Site visit within two to five business days. Load calculation, measurements, finish-work scope. Quote sent within 24 hours: fixed price for installs and remodels, a stated first-hour rate for troubleshooting.
3. Acceptance. Electronic signature on the quote or home-improvement contract, deposit collected (no more than one-third, as Massachusetts law limits), job scheduled.
4. Permit pulled online with the town and the inspection booked before the work day.
5. Work. Materials picked up the day before. Two people on panel, generator and remodel days. The owner is on site.
6. Inspection, with any corrections done the same day.
7. Walkthrough, panel labels, photo record, invoice, payment on completion. Review request sent two days later.
8. Thirty-day check-in call. Warranty requests logged and scheduled within a week.

Capacity. The business is sized for what one crew can sell, do and collect.

Item	Year 1	Year 2	Year 3
Crew	Owner + 1 journeyman or apprentice	Owner + 1 journeyman + 1 apprentice	Owner + 2 journeymen + 1 apprentice
Vans	1	1	2
Billable hours per field person per week	26 to 30	28 to 32	28 to 32
Typical week	2 install days, 2 service days, 1 estimate and admin day	3 install days, 2 service days	Two crews: one installs, one service and remodel
Remodel projects in progress	1 at a time	1 to 2	2

Vehicles, tools and stock. One upfitted van with shelving, ladder rack and a locked tool cabinet; a full hand and power tool set, bender, fish tapes, meter, clamp meter and insulation tester; a rolling stock of breakers, wire, boxes, devices and the fittings that stop a second trip to the supply house. Costs are itemized in the Financial Plan.

Suppliers. Two electrical supply-house accounts on net-30 terms plus a big-box backup, a generator dealer program (Generac or Kohler) for equipment and training, EV charger supplier accounts, and a lumber yard account for remodel work. Suppliers are chosen on delivery, not only price, so the van is loaded the night before.

Permits and compliance. The master electrician pulls electrical permits in the company name for every job that requires one. Remodels run under the Home Improvement Contractor registration with the written contract, deposit limit and change-order rules Massachusetts requires. Work that touches structure needs a Construction Supervisor License or a licensed partner. Rebate paperwork for utility EV charger and Mass Save programs is handled for the customer.

Software.

Need	Tool	Why
Quotes, scheduling, invoicing, review requests	Jobber or Housecall Pro	One app for the whole job, customer texts, card payments
Accounting and tax	QuickBooks Online with a bookkeeper	Clean books from day one, lender-ready statements
Email, calendar, files	Google Workspace	Business email on the domain, shared calendar
Phone	VoIP business number with call recording and a tracking number for ads	Separates the business from the owner's cell; shows which ads produce calls
Reputation	Google Business Profile	Where most customers look first

Insurance and safety. General liability ($1M per occurrence, $2M aggregate), commercial auto, workers' compensation, and tools coverage, with certificates available to customers and general contractors. OSHA 10 for everyone in the field, lockout and testing before touching any circuit, and a daily vehicle and ladder check.

Quality targets. First-time inspection pass rate of 100%, callback rate under 2% of jobs, every panel labeled and photographed, and a review request after every job.

Organization & Management

The owner runs the field, the quotes and the customer relationship. A bookkeeper, an accountant, an attorney and an insurance agent cover the rest part-time, so no overhead salary sits on the books in year one.

Owner. [Owner name], Massachusetts master electrician with [20+] years in the trade, founder and operator of S&T Electrical, with experience in residential service, panel and service work, generators, EV charging and remodel coordination. At JS he does the work, writes the quotes, answers the phone, hires and sets the quality bar.

Role	Who	Starts	Responsibilities
Owner, master electrician	[Owner name]	Launch	Field work, estimates, customer contact, permits, hiring, quality
Journeyman electrician (or fourth-year apprentice)	Hire	Month 1 to 3	Second person on installs; runs service calls alone from year 2
Apprentice	Hire	Year 2	Registered apprentice working under a licensed electrician, one to one on site as Massachusetts requires
Second journeyman	Hire	Year 3	Leads the second van
Office and dispatch, about 10 hours a week	Family member or virtual assistant	Month 4	Answers the phone during work hours, schedules, chases invoices, sends review requests
Bookkeeper	Contract, monthly	Launch	Books, payroll, sales tax exemption certificates, monthly P&L
CPA	Contract, quarterly	Launch	Entity and S-corp election, estimated taxes, year-end
Attorney	As needed	Pre-launch	Entity formation, HIC-compliant contract templates, review of the S&T sale and any non-compete
Insurance agent	Commercial lines	Pre-launch	GL, auto, workers' compensation, tools, certificates

Where the owner's week goes. About 55% in the field, 15% on site visits and quotes, 15% on scheduling, billing and marketing, and 15% on supervising and training. The office help in month four and the field-service software exist to keep the field share above half; when it drops below that, the business is under-staffed, not under-marketed.

Hiring and pay. Field pay set at or above the local journeyman rate (benchmarked in the Financial Plan), a tool allowance, paid continuing-education hours for license renewal, and a quarterly bonus tied to first-time inspection passes and five-star reviews. Hiring is through supplier reps, the local vocational school and the owner's trade network before any job board.

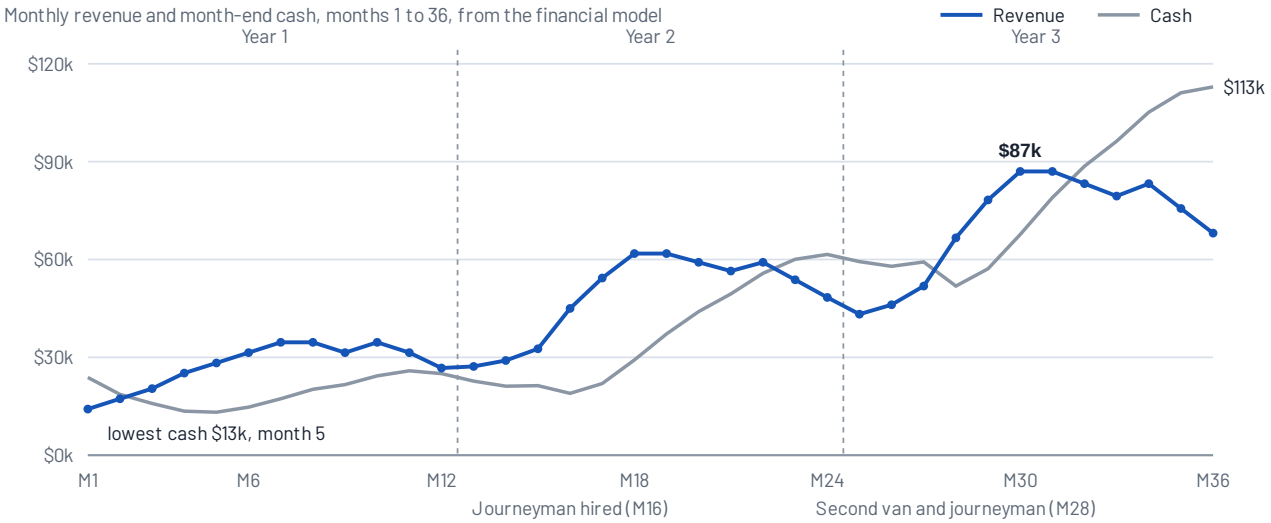

Outside advisors. A free Massachusetts SBDC or SCORE mentor for the first year's financial reviews, a generator dealer program for product training and warranty work, and the electrical supply-house reps, who hear about jobs before anyone else does.

Financial Plan

The plan reaches $330,100 in year one, $588,900 in year two and $849,900 in year three, pays the owner $72,000 rising to $100,000 a year, and keeps month-end cash above $13,000 without drawing the line of credit. Year one is a break-even year after the owner's salary; profit comes with the journeyman in year two.

	Year 1	Year 2	Year 3
Revenue	$330,100	$588,900	$849,900
Materials, equipment and subcontractors	$130,300	$225,500	$318,700
Gross profit after materials	$199,800 (60.5%)	$363,400 (61.7%)	$531,200 (62.5%)
Field labor (wages plus burden)	$52,600	$133,000	$238,500
Operating expenses, incl. marketing, depreciation, interest	$79,800	$103,400	$136,300
of which marketing	$30,500	$47,100	$59,500
Operating profit before owner compensation	$67,500	$126,900	$156,400
Owner draw (salary)	$72,000	$90,000	$100,000
Net profit after owner salary	($4,500)	$36,900	$56,400
Net margin	(1.4%)	6.3%	6.6%
Jobs on the base service lines	240	307	325
Field people including the owner, year end	2	3	4
Revenue per field person	$165,100	$196,300	$212,500
Lowest month-end cash	$13,200 (month 5)	$19,000	$51,900
Cash at year end	$25,000	$61,500	$112,900
Debt service on van loans	$7,500	$7,500	$13,100
Coverage of debt service after the owner's salary	0.7x	6.2x	5.5x
Break-even revenue, including the owner's salary	$337,600	$529,000	$759,600

Revenue reaches $87,000 a month by year three and cash never drops below $13,000

Source: JS-Financial-Model.xlsx, Monthly sheet, 36 months, computed October 2026.

Revenue dips each January and February and each time the owner's attention goes to a new hire, and cash follows revenue by a month; the month-16 and month-28 hires are the two moments the plan spends cash before it earns it back.

What drives the numbers.

- Revenue is built job by job: at run rate, 14 service calls, two panel upgrades, 2.5 EV chargers, 0.4 standby generators, 0.8 interlocks, three lighting jobs and 0.12 remodels a month, at the prices in Services & Pricing. Month 1 runs at 45% of that rate and month 6 at 100%, then the seasonal pattern applies (winter trough, summer peak, fourth-quarter rebate push).
- Each journeyman adds $17,000 a month of revenue at full productivity after a three-month ramp, about $204,000 a year, at the low end of the $207,000 to $400,000 per-technician benchmark (Simpro).
- Materials, equipment and subcontractors run 20% of price on service calls and 58 to 60% on generators and remodels, 39% blended, which is why generators and remodels are kept under a third of the mix.
- Field wages: apprentice $24 an hour from month 2, journeymen $40 an hour (Boston median $38.59, PayScale), plus 15% burden including Massachusetts workers' compensation at $1.475 per $100 of payroll, with 3% annual raises.
- Overhead is about $3,300 a month plus one van ($623 loan payment, $600 fuel and maintenance, insurance) and office help of $500 a month from month 4; the second van arrives in month 28.
- Marketing is $30,500 in year one on the schedule in the Marketing Strategy, then 8% and 7% of revenue.
- The owner draws $4,000 a month for the first quarter, $6,000 for the second and $7,000 after that, then $7,500 and $8,333 in years two and three.
- 90% of revenue is collected in the month of the job and 10% the month after; materials are paid in the month of the job. Income tax is not shown because the entity passes income through to the owner's return.

Reading the coverage line. Debt-service coverage in year one is 0.7x only because the owner takes a $72,000 salary; before the draw, operating profit covers the van payments nine times. A lender underwriting the van loan or a microloan should read the owner's total take ($67,500, $126,900 and $156,400) as the cash available to service debt.

Sensitivity. Revenue 15% below plan in year one costs about $30,000 of gross profit and turns the year into a $34,000 loss after the owner's salary; the reserve plus about $20,000 of the line of credit, or a $2,500 smaller monthly draw, covers it. Revenue 15% above plan adds about $25,000 of profit. Every input is a yellow cell in the financial model workbook (JS-Financial-Model.xlsx), so the owner can run his own cases.

Funding & Use of Funds

JS needs $95,800 to open, and the owner can fund $65,800 of it from the S&T Electrical sale proceeds. The only debt is a $30,000 van loan; a $25,000 line of credit is arranged for seasonality and left undrawn. No outside equity is sought.

Use of funds	Plan ($)	Basis
Work van, used 2021 to 2023	36,000	Financed; CarGurus and TrueCar used-van averages $34,000 to $43,000
Van upfit, wrap and lettering	7,000	Shelving and ladder rack $4,000; wrap $3,000
Tools, test equipment, ladders (top-up to the owner's own kit)	7,900	Pro kits $1,000 to $12,000; Fluke meters $500 to $1,250 each
Initial parts and wire inventory	5,000	A stocked service van carries $5,000 to $7,000
Tablet, phone, software setup, uniforms, domain and listings	3,600	Website is already built
Licenses and registrations (LLC, HIC and Guaranty Fund, CSL, DBA)	1,100	LLC $500; HIC $250; CSL about $250
Insurance down payments	1,400	About 25% of a $5,500 annual program
Legal and accounting setup	3,000	Entity, HIC-compliant contracts, review of the sale terms, books and payroll
Signs, door hangers, business cards	800	Print only; brand is done
Working capital reserve	30,000	Covers the slow first months at the reduced owner draw
Total uses	95,800	

Source of funds	Plan ($)	Share
Owner cash injection (sale proceeds)	65,800	69%
Van loan, 60 months at about 9% ($30,000 financed after a $6,000 down payment)	30,000	31%
Line of credit, arranged and undrawn	25,000	Buffer only

An owner injection of 69% is far above the 10 to 20% lenders ask of a startup (SBA equity injection rules), so the plan does not depend on approval of anything but the van loan. If the owner prefers to keep more cash from the sale, the alternatives are an SBA microloan of up to $50,000 at roughly 8 to 13% through a Massachusetts intermediary such as North Central Massachusetts Development Corporation or Mill Cities

Community Investments, or a Massachusetts Growth Capital Corporation microloan (NerdWallet SBA rates, NCMDC). A $50,000 microloan at 10% over six years costs about $926 a month, which the year-two cash flow covers at better than the 1.25x coverage lenders want.

Second van, year three. The second van and its upfit (about $42,000) are financed the same way in month 28, from year-two cash flow plus a second vehicle loan, and are already in the projections.

Risks & Mitigation

Five risks could sink year one: the terms of the S&T sale, the owner's time and health, a slow start, swings in generator demand, and collections on remodels. Each has a specific answer, and the plan carries a $30,000 reserve and an undrawn $25,000 line of credit for the ones that cannot be planned away.

Risk	Likelihood	Impact	What we do about it
A non-compete or non-solicitation clause in the S&T sale limits the service area or the customers JS may contact	Unknown until the agreement is reviewed	High	Attorney review before launch; service area and messaging written to comply; referral network built from partners, not S&T customers; no "formerly S&T" claims unless the agreement allows them
Key-person risk: the owner is the license, the salesperson and most of the production	Medium	High	Disability and life insurance; a journeyman on payroll by year two; the price book and job workflow kept in the field-service software so a week without the owner does not stop the work
Slow ramp: local leads take three to six months and Local Services Ads verification up to 90 days	High in months 1 to 4	Medium	Owner draw reduced in months 1 to 6, the LSA application filed on day one, ten referral partners visited in month one, the cash reserve and the line of credit
Cannot hire a journeyman at the planned wage; 10,000 electricians retire each year against 7,000 entering	Medium	Medium	Apprentice first (the model assumes it), pay above the local median, tool allowance, vocational-school pipeline, peak work subcontracted to a known electrician
Price pressure from fleet companies with financing and from marketplace lead sites	Medium	Medium	Published prices and no dispatch fee; third-party consumer financing (Synchrony or Wisetack) on generators and panels; sell the owner-on-site promise, which the fleets cannot copy
Generator demand swings a quarter in either direction with storm years	High	Low to medium	Generators are under 20% of planned revenue; maintenance plans smooth it; the crew shifts to panels and EV work in quiet years
Incentives change: the federal 30C charger credit ended in June 2026 and utility rebates reset every year	High	Low	Sell on load management and panel readiness rather than the credit; check National Grid, Eversource and Mass Save programs each January
Code and licensing: new NEC editions, a Construction Supervisor License needed for structural work	Low	Medium	21 continuing-education hours per cycle budgeted; CSL exam in year one or a CSL partner for structural scopes; a permit on every job
Collections and disputes on remodels	Medium	Medium	HIC-compliant contracts, deposits capped at one-third, milestone billing, written change orders, lien rights preserved; following c.142A keeps 93A treble-damage exposure off the table

Risk	Likelihood	Impact	What we do about it
Injury or property damage	Low	High	General liability $1M/$2M, workers' compensation, umbrella, OSHA 10, lockout and testing on every circuit, builder's risk on larger remodels
Winter cash trough in January and February	High	Medium	A winter lineup of interior lighting, EV chargers and remodel electrical; spring installs booked with deposits in the fourth quarter; the line of credit
An early bad review on a new profile	Medium	High	Every review answered within a day, a fix-first policy, the two-year warranty honored without argument

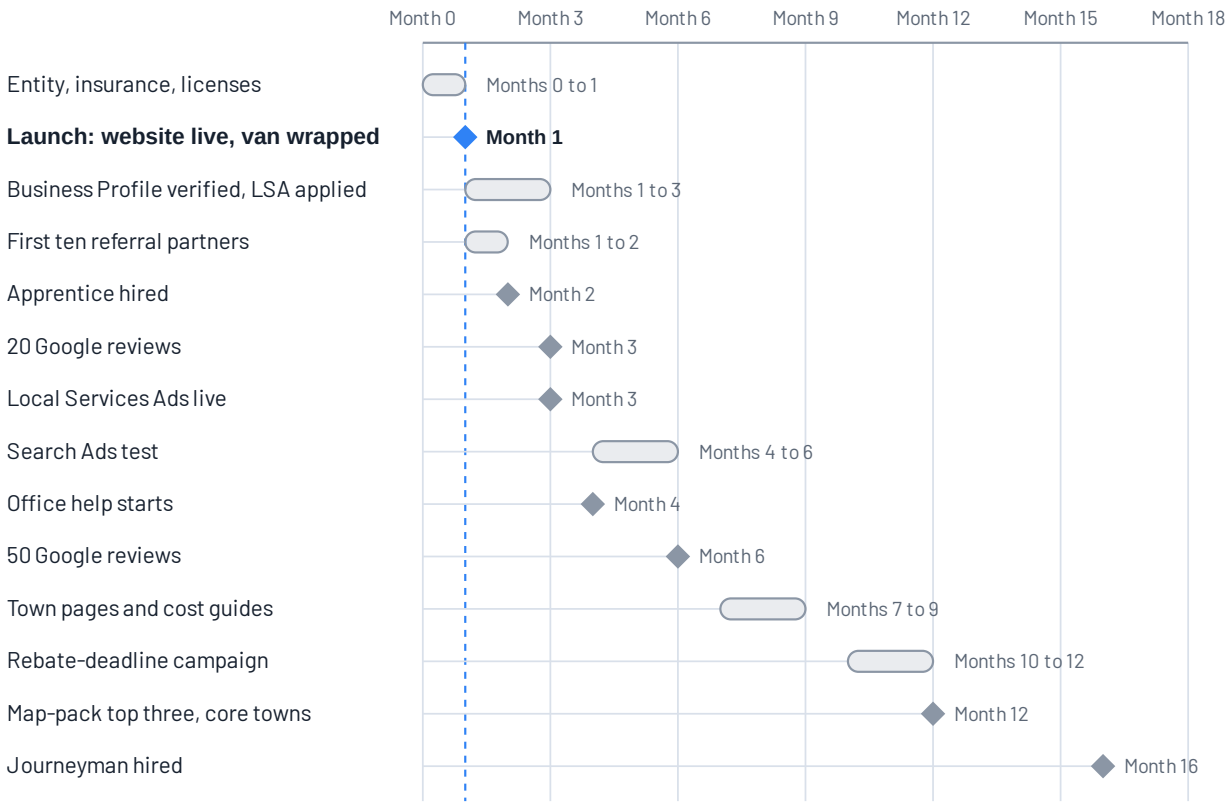

Contingency. If revenue is under 70% of plan at month nine, marketing drops back to the Business Profile and referrals, the journeyman hire moves out a year, and the owner takes electrical subcontracts from the remodelers in the referral network until the lead flow recovers. The business stays solvent at that level because overhead is small and the owner's draw is the largest flexible cost.

Milestones & 90-Day Launch Plan

The first 90 days build the lead engine before the busy season; the apprentice starts in month 2, Local Services Ads go live by month 3, and the journeyman is hired in month 16 once the base lines carry the overhead.

From launch to a second electrician in sixteen months

Milestones by month of operation; month 1 is the first month open

Plan milestones by month of operation, months 0 to 18.

The dashed line marks launch; everything to its left is done before the first paying job, and the two hires are the only steps that wait on revenue.

Days 1 to 30.

- [ ] Form the LLC, open the business bank account and card, bind general liability, auto, workers' compensation, tools and umbrella coverage, and collect certificates
- [ ] File the Home Improvement Contractor registration and the Construction Supervisor License application; confirm the master license is current
- [ ] Buy and upfit the van, apply the wrap, stock the initial inventory, set up supply-house accounts
- [ ] Load the price book into the field-service software, connect card payments and the review request

- [ ] Create the Google Business Profile and start verification; file the Local Services Ads application and background checks
- [ ] Put the website on the domain with analytics, Search Console and the real phone, email and license numbers
- [ ] Build the 13 core citations with one exact name, address and phone
- [ ] Visit ten referral partners: three remodelers, three real-estate agents, two property managers, two supply-house counters
- [ ] Post the apprentice opening with the vocational school and the trade network
- [ ] Work the owner's own network for the first jobs, with the review link on every invoice

Days 31 to 60.

- [ ] Apprentice on payroll and registered
- [ ] Generac dealer application, ChargePoint and Qmerit certifications started
- [ ] 20 Google reviews, every one answered
- [ ] Nextdoor and Facebook pages live with job photos; two posts a month
- [ ] Local Services Ads live if verification is complete; otherwise chase it weekly
- [ ] First remodel job through a partner remodeler

Days 61 to 90.

- [ ] Search Ads test on service-plus-town keywords with a $600 monthly cap
- [ ] Office help for ten hours a week answering the phone
- [ ] First two cost-guide articles published; town pages drafted
- [ ] Home-inspection letter program offered to five real-estate agents
- [ ] Month-3 review against plan: 45 leads a month, 45% booked, revenue at 65% of run rate, 50 reviews in sight

Twelve-month milestones. 85 reviews at 4.9 or better; map-pack top three in Westford, Chelmsford and Littleton; about 240 jobs and revenue near the year-one plan; year-two budget set from actual cost per lead; journeyman recruiting begun for a month-16 start.

Appendices

Everything referenced in this plan is delivered with it: the brand package, the website source, the financial model and four research memos.

A. Brand package. Primary stacked logo, horizontal logo, mark-only and square icon, each in full color, reverse on navy, one-color navy and one-color white, plus an optional roofline alternate; SVG masters and print-resolution PNGs, favicons and a social image. Palette: Navy #0B1F3F, JS Blue #1655B8, Bright Blue #2F82F5, Electric #3DB4FF, Hi-Vis Amber #FFB020 (calls to action only). Type: Saira for headlines, Barlow for text, both free under the SIL Open Font License. The brand guide with clear-space rules, minimum sizes and mockups is a separate PDF in the package.

B. Website. 13 pages: home, services, panel upgrades, EV charger installation, generator installation, lighting installation, electrical repairs, remodeling contractor, service area, about, contact, privacy, 404. Every business fact is a constant at the top of the page generator script; change it there and regenerate. Hosting recommendation: Netlify, where the quote form works with no setup.

C. Long-tail keywords for articles and FAQs. how much does a 200 amp panel upgrade cost in Massachusetts; signs you need an electrical panel upgrade; Federal Pacific panel replacement; do I need a permit to install an EV charger in MA; EV charger rebate Massachusetts; Tesla Wall Connector installation cost; can my 100 amp panel handle an EV charger; what size generator do I need for my house; Generac vs Kohler; transfer switch vs interlock kit; whole house generator cost Massachusetts; recessed lighting cost per fixture; ceiling fan installation cost; smart switch no neutral; aluminum wiring repair cost; knob and tube replacement cost; kitchen remodel electrical requirements Massachusetts; finishing a basement in Westford permits; home inspection electrical repairs; electrician hourly rate Massachusetts.

D. Facts the owner must supply before launch.

- [ ] Legal entity name, formation date and the owner's name as it should appear
- [ ] Business phone (and whether it transfers from S&T), email and domain
- [ ] Master electrician license number, Home Improvement Contractor registration number, Construction Supervisor License status
- [ ] Home base town and the final list of towns served
- [ ] The S&T sale closing date and any non-compete or non-solicitation terms
- [ ] Warranty term, hours, and the owner's own prices for the six service pages
- [ ] Google Business Profile review link once the profile is verified
- [ ] Target launch month, which sets month 1 of the financial model

E. Financial model (JS-Financial-Model.xlsx). Four sheets: Assumptions (yellow cells are the levers), Startup Costs, Annual Summary and a 36-month Monthly sheet with P&L and cash flow, all formula-driven. Opening it in Excel or Google Sheets recalculates everything, and changing a yellow cell flows through every table.

F. Research memos (JS-Market-Research-Appendix.pdf). Industry and market (industry size, EV and heat-pump data, town profiles, pricing, labor, regulation, seasonality); competitors (15 firms, directories, pricing signals, gap analysis); SEO and marketing (keywords, SERP, Business Profile practice, channel costs, review statistics, technical SEO); startup costs and operations (equipment, insurance, software, benchmarks, financing). Each memo lists its sources; all were read from search listings in October 2026, so verify any figure before quoting it to a lender.

G. Regulatory references.

Rule	What it governs	Link
237 CMR 13, 17, 22	Electrician licensing, renewal every three years with 21 continuing-education hours	Mass.gov
527 CMR 12.00	Massachusetts Electrical Code, the 2023 NEC with state amendments, effective for permits after February 28, 2023	Mass.gov
M.G.L. c.142A and 201 CMR 14	Home improvement contractor registration, written contracts over $1,000, deposits capped at one-third, Guaranty Fund	Mass.gov HIC program
780 CMR R5	Construction Supervisor License for structural work and building permits	Mass.gov
FTC Consumer Review Rule, 16 CFR 465	No fake, bought or gated reviews	Crowell summary
